

# Center Pole Drape

## Installation Instructions

### Preliminary Set-up:

During the tent installation the drape hardware needs installed. Pole tents require a rope pulley system that connects to the pole tent adapter and the center hub assembly. The pole tent adapter is installed before the center pole(s) are installed.

1. Insert the pole pin of the center pole through the o-ring of the pole tent adapter. Ensure the ropes are connected to the pole tent adapter pulley system. Repeat at all center poles.
2. Make sure the tent is square, level and tensioned properly and the center poles are correct height. Once the tent is erected properly, you can begin installing the Hi Pro center pole drape.

### Set Up Instructions:

1. Run the rope through the pulley system.
2. Attach the quick links to the center hub connecting at hole locations. Tighten to close. Tie the rope to the o-ring.
3. Fit the two piece center hub assembly around the center pole approximately 5' (1.52 m) from the ground.

4. Once the pulley system is in place attach the pole drape clips around the center hub assembly.

5. Using the rope pulley system raise the center hub assembly to the top of the pole, while also attaching the hook and loop seam together. Make sure the pulley rope is inside the drape. Tie the pulley rope around the center pole to hold in place.

6. Tie the sash at the desired location.
